

## **I cannot apply a clip transition or audio cross-fade. How do I solve this problem?**

This problem may be caused by either of the following:

1. Clip has insufficient captured material to extend it
2. You are not working in fixed mode

### **Confirming clip margin**

If the clip has insufficient captured material, a black triangle mark will appear at the corner of the clip. In this case, trim back the clip to give it enough material to effect the transition and then apply.

### **Switching to fixed mode**

- 1) Choose [Settings] > [User Settings].
- 2) User Settings window will appear. Choose [Application] > [Timeline] in the left-pane.
- 3) Uncheck "Extend Clips when Applying Transition / Cross Fade".
- 4) Click [Apply] and then [OK] button,
